EE 111. Introduction to Electrical Engineering. 1 unit
Term Typically Offered: F
Concurrent: EE 151.

A general overview of the field of electrical engineering. Preparation for successful completion of the Electrical Engineering (EE) program at Cal Poly. 1 lecture. Not required for students with transfer credit for EE 211 or EE 241.

EE 112. Electric Circuit Analysis I. 2 units
Term Typically Offered: F
Prerequisite: MATH 142 or equivalent. Recommended: EE 111/151.

Introduction to basic circuit analysis. Resistive circuits, voltage and current sources, network theorems. Course may be offered in classroom-based or online format. 2 lectures.

EE 113. Electric Circuit Analysis I. 3 units
Term Typically Offered: F, W
Prerequisite: MATH 142. Concurrent: EE 143. Recommended: EE 111, EE 151; PHYS 133.

Basic circuit analysis and basic electronics manufacturing. Resistive circuits, voltage and current sources, op-amps, network theorems. Practical electronics manufacturing expanded through concepts such as CAD/CAM design, Design for Manufacture (DFM), documentation requirements, deposition and etching processes, prototyping, and production planning. PCB design and assembly. 3 lectures.

EE 133. Digital Design. 4 units
Term Typically Offered: F, W, SP
Prerequisite: An orientation course in student's major (EE 111 and EE 151; or CPE 100) and CPE/CSC 101.

Number systems, Boolean algebra, Boolean functions, and function minimization. Analysis and design of combinational and sequential digital logic circuits. Hardware Description Language (HDL) concepts and applications digital design and synthesis in FPGAs. Course may be offered in classroom-based or online format. 3 lectures, 1 laboratory. Crosslisted as CPE/EE 133.

EE 143. Electronics Manufacturing and Circuit Analysis Laboratory. 1 unit
Term Typically Offered: F, W, SP
Prerequisite: MATH 142. Concurrent: EE 113. Recommended: EE 111, EE 151; PHYS 133.

Use of electrical and electronic test equipment. Introduction to engineering design flow (design, simulate, build, test). PCB design and manufacturing. 1 laboratory.

EE 151. Introduction to Electrical Engineering Laboratory. 1 unit
Term Typically Offered: F
Concurrent: EE 111.

A variety of hands-on experiments and demonstrations in electrical engineering, providing background and motivation for successful completion of the Electrical Engineering (EE) program at Cal Poly. Not open to students with credit for EE 241. 1 laboratory.

EE 200. Special Problems. 1-2 units
Term Typically Offered: FW,SPSU
Prerequisite: Consent of department chair.

Individual investigation, research, studies or surveys of selected problems. Total credit limited to 4 units, with a maximum of 2 units per quarter.

EE 201. Electric Circuit Theory. 3 units
Term Typically Offered: FW,SPSU
Prerequisite: MATH 244, PHYS 133.

Application of fundamental circuit laws and theorems to the analysis of DC, and steady-state single-phase and three-phase circuits. Not for electrical engineering majors. Course may be offered in classroom-based or online format. 3 lectures.

EE 211. Electric Circuit Analysis II. 3 units
Term Typically Offered: F, W
Prerequisite: EE 112 or EE 113. Prerequisite or Concurrent: PHYS 133, MATH 244. Concurrent: EE 241.

Continuation of basic circuit analysis. Op-amp circuits. Energy storage elements, RC and RL circuits, and AC steady state analysis. 3 lectures.

EE 212. Electric Circuit Analysis III. 3 units
Term Typically Offered: F, W
Prerequisite: MATH 244, EE 211. Concurrent: EE 242.

AC power, 3-phase circuits. Mutual inductance, series and parallel resonance and two-port networks. Frequency response, including Bode plots. 3 lectures.

EE 228. Continuous-Time Signals and Systems. 4 units
Term Typically Offered: F, W
Prerequisite: BMED 355; or EE 212 and EE 242. Recommended: MATH 241.

Continuous-time systems analysis, with emphasis on linear time-invariant (LTI) systems. Classifications of continuous-time systems. Convolution and its application to LTI systems. The Laplace transform, Fourier transform, and Fourier series, and their application to the analysis of LTI systems. 4 lectures.

EE 233. Computer Design and Assembly Language Programming. 4 units
Term Typically Offered: F, W
Prerequisite: CPE/EE 133.

Design and implementation of digital computer circuits via CAD tools for programmable logic devices (PLDs). Basic computer design with its datapath components and control unit. Introduction to assembly language programming of an off-the-shelf RISC-based microcontroller. Not open to students with credit in CPE/EE 229. 3 lectures, 1 laboratory. Crosslisted as CPE/EE 233.

EE 241. Electric Circuit Analysis Laboratory II. 1 unit
Term Typically Offered: F, W
Prerequisite: EE 112 or EE 113; EE 151 for EE students. Prerequisite or concurrent: MATH 244; PHYS 133. Concurrent: EE 211.

Use of electrical and electronic test equipment. Experimental verification of circuit analysis concepts including Kirchhoff's Laws, Thevenin's Theorem, maximum power transfer and superposition. 1 laboratory.
EE 242. Electric Circuit Analysis Laboratory III. 1 unit
Term Typically Offered: F, W, SP
Prerequisite: MATH 244, EE 241 or consent of department chair.
Concurrent: EE 212.
Observation of transient and steady-state phenomena, phase-shift circuits, resonance. Use of phasor diagrams. 1 laboratory.

EE 251. Electric Circuits Laboratory. 1 unit
Term Typically Offered: F,W,S,SR,SU
Concurrent: EE 201.
Techniques of measurement of DC and steady-state AC circuit parameters. Equivalent circuits, nonlinear elements, resonance. 1 laboratory.

EE 255. Energy Conversion Electromagnetics. 3 units
Term Typically Offered: F,W,S,SR,SU
Prerequisite: EE 212 and EE 242; or EE 201 and EE 251. Concurrent: EE 295.
Fundamentals of electro-mechanical energy conversion. Magnetic circuits and electromagnetic devices. Theory of operation and operating characteristics of transformers, and AC induction and synchronous machines. 3 lectures.

EE 270. Selected Topics. 1-4 units
Term Typically Offered: TBD
Prerequisite: Open to undergraduate students and consent of instructor.
Directed group study of selected topics. The Class Schedule will list topic selected. Total credit limited to 8 units. 1 to 4 lectures.

EE 271. Selected Laboratory. 1-2 units
Term Typically Offered: SP
Prerequisite: Consent of instructor.
Directed group laboratory study of selected topics. The Class Schedule will list topic selected. Total credit limited to 6 units. 1 to 2 laboratories.

EE 295. Energy Conversion Electromagnetics Laboratory. 1 unit
Term Typically Offered: F,W,S,SR,SU
Prerequisite: EE 212 & EE 242 or EE 201 & EE 251. Concurrent: EE 255.
Single-phase and three-phase transformers. Starting of rotating machines, evaluation of characteristics of rotating machines. 1 laboratory.

EE 302. Classical Control Systems. 3 units
Term Typically Offered: W, SP
Prerequisite: EE 228. Concurrent: EE 342. Recommended: EE 368.

EE 306. Semiconductor Device Electronics. 3 units
Term Typically Offered: F, W, SP
Prerequisite: CHEM 124, EE 212 & EE 242, EE 143 or IME 156 or IME 458, PHYS 211. Concurrent: EE 346.
Internal operation, semiconductor physics, terminal characteristics, models and application of diodes (LEDs, solar cells, and photo-diodes) and transistors (field-effect and bipolar). 3 lectures.

EE 307. Digital Electronics and Integrated Circuits. 3 units
Term Typically Offered: F, W, SP
Analysis, design, application and interfacing of integrated logic circuits, including NMOS, CMOS, TTL, ECL, and other logic families. 3 lectures.

EE 308. Analog Electronics and Integrated Circuits. 3 units
Term Typically Offered: F, SP
Analysis and design of integrated circuits for use in analog applications. Gain, frequency response, and feedback of linear small-signal amplifiers. 3 lectures.

EE 314. Introduction to Communication Systems. 3 units
Term Typically Offered: W, SP
Prerequisite: STAT 350.
Analog modulation, including: double-sideband modulation, amplitude modulation, single-sideband modulation, frequency modulation, phase modulation. Performances of such systems in the presence of white Gaussian noise. Implementations of transmitters and receivers. 3 lectures.

EE 321. Electronics. 3 units
Term Typically Offered: F,W,S,SR,SR
Prerequisite: EE 201 or BRAE 216 for BRAE majors.
Semiconductor devices and circuits. Instrumentation amplifiers, power control rectifiers, feedback, pulse circuits, digital logic circuits. Not for Electrical Engineering majors. 3 lectures.

EE 322. Microcontrollers for Everyone. 4 units
GE Area B7; GE Area F
Term Typically Offered: F, W
Prerequisite: Junior standing; completion of GE Area A with grades of C- or better; completion of GE Area B1 with a grade of C- or better in at least one of the courses; and completion of GE Areas B2, B3, and B4. Recommended: MATH 118.
Microcontroller history and computer systems overview. Introduction to basic electrical circuits and computer programming concepts. Overview of computer peripherals such as LEDs, switches, LCD displays, timers, and ADCs; and interfacing various types of external sensors. Developing applications of microcontrollers using an integrated development environment. 3 lectures, 1 laboratory. Fulfills GE Area B7 or GE Area F.

EE 328. Discrete Time Signals and Systems. 3 units
Term Typically Offered: F
Prerequisite: BMED 355 or EE 228. Concurrent: CPE/EE 368.
Discrete-time systems and analysis, with emphasis on linear time-invariant (LTI) systems. Sampling theorem. Classification of discrete-time systems. Convolution and its application to LTI systems. The z transform, discrete-time Fourier transform, and discrete Fourier transform. Introduction to digital filters. Not open to students with credit in CPE 327. 3 lectures. Crosslisted as CPE/EE 328.
EE 329. Microcontroller-Based Systems Design. 4 units  
Term Typically Offered: F, SP  
Prerequisite: EE 307 & EE 347, EE 229 & EE 269 or CPE/EE 233.  
Design, implementation and testing of microcontroller-based systems.  
Hardware and C software for embedded systems to sense and actuate  
external devices. I/O common embedded systems to interface I/O  
devices and protocols. Analysis of power consumption. Ethics. 3 lectures,  
1 laboratory. Not open to students with credit in CPE/EE 336. Crosslisted  
as CPE/EE 329.

EE 335. Electromagnetic Fields and Transmission. 4 units  
Term Typically Offered: F, SP  
Prerequisite: EE 201 and EE 251; or EE 212 and EE 242; and MATH 241.  
Concurrent: EE 375.  
Maxwell’s equations. Plane wave propagation in free space. Static  
electric and magnetic fields. Distributed-circuit concepts and  
transmission line parameters. Reflections and standing waves. The  
Smith chart and its applications. Transmission line measurements and  
impedance matching techniques. 4 lectures.

EE 336. Microprocessor System Design. 4 units  
Term Typically Offered: TBD  
Prerequisite: CPE/EE 233.  
Introduction to microcontrollers and integrated microprocessor systems.  
Hardware/software trade-offs, system economics, and functional  
configurations. Interface design, real-time clocks, interrupts, A/D  
conversion, serial and parallel communications, watch-dog timers,  
low power operation, event-based inter-peripheral communication,  
and assembly and higher-level language programming techniques.  
Architecture and design of sampled data and low-power systems. Not  
open to students with credit in CPE/EE 329. 3 lectures, 1 laboratory.  
Crosslisted as CPE/EE 336.

EE 342. Classical Control Systems Laboratory. 1 unit  
Term Typically Offered: W, SP  
Prerequisite: EE 228. Concurrent: EE 302. Recommended: EE 368.  
Laboratory work pertaining to classical control systems, including servo  
control, transient and frequency responses, stability, and computer-aided  
analysis of control systems. 1 laboratory.

EE 346. Semiconductor Device Electronics Laboratory. 1 unit  
Term Typically Offered: F, W, SP  
Prerequisite: CHEM 124, EE 212 & EE 242, EE 143 or IME 156 or IME 458,  
Experimental determination of device characteristics and models. 1  
laboratory.

EE 347. Digital Electronics and Integrated Circuits Laboratory. 1 unit  
Term Typically Offered: F, W, SP  
Prerequisite: CPE/EE 133, EE 306 and EE 346. Corequisite: CPE/EE 233.  
Concurrent: EE 307.  
Computer simulation and experimental investigation of the  
characteristics, applications and interfacing of different logic families. 1  
laboratory.

EE 348. Analog Electronics and Integrated Circuits Laboratory. 1 unit  
Term Typically Offered: F, SP  
Design, simulation, construction and testing of solid state amplifiers and  
sub-circuits to meet stated specifications. 1 laboratory.

EE 351. Electronics Laboratory. 1 unit  
Term Typically Offered: FW,SPSU  
Prerequisite: EE 251 or BRAE 216 for BRAE majors. Concurrent: EE 321.  
Instrumentation amplifiers, feedback, rectifiers and power control, pulse  
and digital logic circuits. 1 laboratory.

EE 356. Signals and Systems Laboratory. 1 unit  
Term Typically Offered: F, W  
Prerequisite: BMED 355 or EE 228. Concurrent: CPE/EE 328.  
Laboratory work pertaining to linear systems, including Fourier analysis,  
time and frequency responses, and system transfer function. Not open to  
students with credit in CPE 367. 1 laboratory. Crosslisted as CPE/EE 368.

EE 375. Electromagnetic Fields and Transmission Laboratory. 1 unit  
Term Typically Offered: F, SP  
Concurrent: EE 335.  
Transmission line and passive component measurements at microwave  
frequencies. Response to pulse excitation using time domain techniques  
and sinusoidal excitation using frequency domain techniques.  
Application of the Smith Chart and network analyzers in transmission line  
characterization and impedance matching techniques. 1 laboratory.

EE 400. Special Problems. 1-5 units  
Term Typically Offered: FW,SPSU  
Prerequisite: Consent of department chair.  
Individual investigation, research, studies, or surveys of selected  
problems. Total credit limited to 5 units.

EE 402. Electromagnetic Waves. 4 units  
Term Typically Offered: F, W  
Prerequisite: EE 335.  
Maxwell’s equations and plane wave propagation in materials. Reflection  
and transmission of normal and oblique incidence plane waves at planar  
boundaries between different media. Wave guides. Antennas. 4 lectures.

EE 403. Fiber Optic Communication. 3 units  
Term Typically Offered: F  
Prerequisite: EE 335 or PHYS 323. Concurrent: EE 443.  
Propagation of light in optical fibers, attenuation and bandwidth. LED  
and Laser Diode sources for use with optical fibers. Optical sources,  
detectors, and receivers. Design of optical communication systems with  
applications in telecommunications and local area networks (LANs). 3  
lectures.
EE 405. High Frequency Amplifier Design. 3 units  
Term Typically Offered: F  
Prerequisite: EE 308 & EE 348, EE 335. Concurrent: EE 445.  
Design of modern electronic amplifiers and amplifier systems with advanced techniques. UHF and microwave small signal amplifier design utilizing microstrip transmission lines, S parameters of GaAs FET, and bipolar transistors. Low noise, broadband, and power amplifier designs. Oscillator designs. 3 lectures.

EE 406. Power Systems Analysis I. 4 units  
Term Typically Offered: F  
Prerequisite: EE 335, EE 255 & EE 295.  
Introduction to electric power systems. Representation of power systems and its components including transmission lines, synchronous machines, transformers and loads. One line diagrams and per unit calculations. Symmetrical faults. Load flow analysis. 4 lectures.

EE 407. Power Systems Analysis II. 4 units  
Term Typically Offered: W  
Prerequisite: EE 406.  
Symmetrical components, unbalanced faults, power system stability, system protection, relays and relay systems, power system instrumentation and measurement techniques, economic operation. 4 lectures.

EE 409. Electronic Design. 3 units  
Term Typically Offered: F, W  
Prerequisite: EE 308 & EE 348; CPE/EE 328 & CPE/EE 368, or CPE 327 & CPE 367; CPE/EE 329 or CPE/EE 336 or CPE 316. Concurrent: EE 449.  

EE 410. Power Electronics I. 4 units  
Term Typically Offered: F  
Prerequisite: EE 308 and EE 348, or EE 321 and consent of instructor.  
Introduction to power electronic converters and power semiconductor devices. Steady state analysis, performance study, and design of uncontrolled and controlled rectifiers, non-isolated and isolated DC-DC converters, AC voltage controllers, and single-phase inverters. Use of commercially available software. 3 lectures, 1 laboratory.

EE 411. Power Electronics II. 4 units  
Term Typically Offered: W  
Prerequisite: EE 410.  

EE 412. Advanced Analog Circuits. 3 units  
Term Typically Offered: W  
Prerequisite: EE 314, EE 409 & EE 449. Concurrent: EE 452.  
Application of linear integrated circuits to data acquisition problems: transducer interfacing, linear and nonlinear preprocessing, phase-locked loops, and high performance quantization and recovery (A/D, D/A conversion). 3 lectures.

EE 413. Advanced Electronic Design. 4 units  
Term Typically Offered: SP  
Prerequisite: CSC 101, EE 409 and EE 449.  
Advanced design of electronic circuits and subsystems, including sustainability and design as a process. Automated testing with GPIB instruments. Implementation of specific design projects, including team-based projects. 3 lectures, 1 laboratory.

EE 414. Robotic Systems Integration. 4 units  
Term Typically Offered: TBD  
Prerequisite: EE/CPE 329 or EE/CPE 336 or CSC/CPE 357 or ME 305.  
Integration of sensors, actuators, chassis, and Linux-based computational platforms into functioning autonomous robotic systems. Embedded Linux system programming, inter-process software communication, basic sensor fusion techniques, Pulse Width Modulation (PWM) motor actuation, and web-based interfacing for remote system way-pointing and monitoring. 3 lectures, 1 laboratory. Crosslisted as CPE/EE 414.

EE 415. Communication Systems Design. 3 units  
Term Typically Offered: F  
Prerequisite: EE 314, CPE 327 or EE 328.  
Design of modern wireline and wireless electronic communication and telemetry systems. Emphasis: practical implementation and comparative evaluation of various communication systems. 3 lectures.

EE 416. Digital Communication Systems. 3 units  
Term Typically Offered: TBD  
Prerequisite: EE 314, EE 328 or CPE 327.  
Baseband (PCM, PAM, DM) signals and transmission. Bandpass (PSK, FSK, ASK) modulation and demodulation techniques. Digital communication signals in the presence of noise and detection of signals in Gaussian noise. Other topics such as: quantization, multiplexing and multiple access, spread spectrum techniques, coding, synchronization. 3 lectures.

EE 417. Alternating Current Machines. 4 units  
Term Typically Offered: F  
Prerequisite: EE 255 & EE 295.  
Alternating current machines. Generalized, operational and dynamic analysis. Steady-state and transient operation of synchronous machines and linear induction machines. 3 lectures, 1 laboratory.
EE 418. Photonic Engineering. 3 units
Term Typically Offered: SP
Prerequisite: EE 335 or PHYS 323. Concurrent: EE 458.

Modern optical design with emphasis on the use of computers to design simple optical systems and to evaluate existing optical designs. Paraxial and exact ray tracing through thin and thick lenses, mirrors, and prisms. Radiometry and photometry. Electro-optic, acousto-optic, and magneto-optic modulators and their applications. Thermal detectors, semiconductor detectors, and charge coupled device (CCD) arrays. 3 lectures.

EE 419. Digital Signal Processing. 3 units
Term Typically Offered: W
Prerequisite: CSC 101 or CSC 231; EE 328 and EE 368, or CPE 327 and CPE 367. Concurrent: EE 459.

EE 420. Sustainable Electric Energy Conversion. 4 units
Term Typically Offered: W
Prerequisite: CHEM 124; EE 255 and EE 295.

Electrical engineering aspects of photovoltaic and wind power generation and usage, and electrochemical energy conversion. Power control, processing, and quality for grid-connected and stand-alone systems. Distribution and storage of electric energy. Hydrogen and synthetic fuels. Distributed generation. 3 lectures, 1 laboratory.

EE 422. Polymer Electronics Laboratory. 1 unit
Term Typically Offered: F
Prerequisite: EE 337 or MATE 340 or CHEM 319 or PHYS 340.

Experimental procedures in polymer electronics. Investigation of the characteristics of a polymer electronic device. 1 laboratory. Crosslisted as EE/PHYS 422.

EE 423. Micro/Nano Fabrication. 3 units
Term Typically Offered: W
Prerequisite: BMED 212 or MATE 210.

Fabrication science and technology for creating micro and nano scale devices. Explore basic processes such as oxidation, diffusion, ion implantation, etching, chemical and physical vapor deposition, photolithography. Develop an understanding of the science of each process and how to select the right steps for fabricating electronic, photon and micro-electro-mechanical systems devices. 3 lectures. Crosslisted as BMED 434/EE 423/MATE 430.

EE 424. Introduction to Remote Sensing. 4 units
Term Typically Offered: W
Prerequisite: MATH 244; senior or graduate standing in engineering.

Radiation characteristics, sensor technology and platforms, satellite systems, system design tradeoffs, collection and transmission of radiometric data, GPS, thermal remote sensing, active radar and microwave remote sensing, interpretation and exploitation of remotely sensed data for various applications. 3 lectures, 1 laboratory.

EE 425. Analog Filter Design. 3 units
Term Typically Offered: SP
Prerequisite: EE 409 & EE 449. Concurrent: EE 455.

EE 428. Computer Vision. 4 units
Term Typically Offered: W
Prerequisite: CPE 327 or CPE/CSC 357 or EE 328 or ME 305.

Introduction to the concepts of 2D and 3D computer vision: low-level image processing methods such as filtering and edge detection; feature extraction; segmentation and clustering; stereo vision; appearance-based and model-based algorithms. 3 lectures, 1 laboratory. Crosslisted as CPE/EE 428.

EE 431. Computer-Aided Design of VLSI Devices. 4 units
Term Typically Offered: W
Prerequisite: EE 307 and EE 347. Recommended: EE 308 and EE 348, for students interested in analog design.

Design of VLSI circuits using state-of-the-art CAD software. Design issues and algorithms related to design using CAD. Full custom design through automated design and a major multi-week chip design project in lab. 3 lectures, 1 laboratory. Crosslisted as CPE 441/EE 431.

EE 432. Digital Control Systems. 3 units
Term Typically Offered: F
Prerequisite: EE 302 and EE 342; or CPE 327 and CPE 367. Concurrent: CPE/EE 472. Recommended: EE 328 and EE 368.

Analysis and design of microprocessor-based controls. Introduction of continuous and discrete transform methods for design of closed-loop dynamic systems. Applications in robotics, automotive, aircraft and industrial process control. 3 lectures. Crosslisted as CPE/EE 432.

EE 433. Introduction to Magnetic Design. 4 units
Term Typically Offered: TBD
Prerequisite: EE 255 and EE 295.

Design of magnetic components. Fundamentals of magnetics, magnetic cores, design of power transformer, three-phase transformer, dc inductor, ac inductors, dc-dc converter transformer design, actuators. Use of commercially available software. 3 lectures, 1 laboratory.

EE 434. Automotive Engineering for a Sustainable Future. 4 units
Term Typically Offered: SP
Prerequisite: Junior standing in any engineering or physical science major.

Multidisciplinary investigation of automotive renewable fuels and electric/hybrid vehicles. Analyze and design related technologies and systems. Methods for complete-cycle energy and GHG analysis. Comparative emissions, efficiency, power output, and infrastructure requirements. Laboratory projects converting engines and vehicles to operate on alternative fuels or electric propulsion. 3 lectures, 1 laboratory. Crosslisted as BRAE/EE 434.
EE 439. Introduction to Real-Time Operating Systems. 4 units
Term Typically Offered: TBD
Prerequisite: CPE/EE 329 or CPE/EE 336.

Theory, design and implementation of real-time operating system-based embedded systems. Scheduling algorithms, operating system resources, peripheral device interfacing and embedded system architecture. Resource management issues in a resource-limited (microcontroller-based) environment. 3 lectures, 1 laboratory. Crosslisted as CPE/EE 439.

EE 440. Wireless Communications. 3 units
Term Typically Offered: W
Prerequisite: EE 335, EE 314. Concurrent: EE 480.

Wireless microwave system design and analysis. RF transmission lines, microwave networks, receiver design, modulation techniques, and mixer characterization and realizations. Noise and distortion, RF oscillators and frequency synthesizers, filter design. Radiating systems and electromagnetic wave propagation, microwave amplifier design. 3 lectures.

EE 442. Real Time Embedded Systems. 4 units
Term Typically Offered: F
Prerequisite: CPE/EE 329 or CPE/EE 336 or CPE 316.

Theory, design and implementation of modern embedded systems. Scheduling algorithms and operating system resources. System on Chip (SoC) design issues such as interfacing with custom hardware description language (HDL) peripherals, high-performance chip interconnect standards, energy use, area, and hardware versus software performance trade-offs. 3 lectures, 1 laboratory. Crosslisted as CPE/EE 442.

EE 443. Fiber Optics Laboratory. 1 unit
Term Typically Offered: F
Prerequisite: EE 335 or PHYS 323. Concurrent: EE 403.

Experimental investigation of the properties of optical fibers, sources, and detectors. Measurement of fiber physical characteristics, attenuation, losses, and bandwidth. Evaluation of an analog and digital fiber optic data link. 1 laboratory.

EE 444. Power Systems Laboratory. 1 unit
Term Typically Offered: SP
Prerequisite: EE 406.

Protective relaying, coordination, and relay calibration. Power control using transformers, parallel operation of generators, and computer simulation of power systems. 1 laboratory.

EE 445. High Frequency Amplifier Design Laboratory. 1 unit
Term Typically Offered: F
Prerequisite: EE 308 & EE 348, EE 335. Corequisite: EE 405.

Experimental investigation employing advanced techniques. Design of high-frequency electronic amplifiers utilizing S-parameters of bipolar transistors, network analyzers, and computer simulation techniques. 1 laboratory.

EE 446. Design of Fault-Tolerant Digital Systems. 4 units
Term Typically Offered: F
Prerequisite: CPE/EE 329 or CPE/EE 336 or CPE 316. Recommended: STAT 350.

Hardware and software fault tolerance concepts: fault models, coding in computer systems, module and system level fault detection mechanisms, reconfiguration techniques for general purpose processors and ASICs, and software fault tolerance techniques such as recovery blocks, N-version programming, checkpointing, and recovery. 3 lectures, 1 laboratory. Crosslisted as CPE/EE 446.

EE 447. Stringed Musical Instrument Acoustics, Mechanics, and Transducer Design. 4 units
Term Typically Offered: SP
Prerequisite: EE/CPE 329 or EE/CPE 336 or CPE 316 or ME 305.

Acoustics, sound production, and transducer design in the context of stringed musical instruments. Introduces music theory, scales and temperament, sound radiation, structural dynamics of stringed instruments. Integrates engineering topics including frequency spectrum analysis, electromagnetics, properties of materials, digital and analog circuit design. 3 lectures, 1 laboratory. Crosslisted as CPE/EE 447.

EE 449. Electronic Design Laboratory. 1 unit
Term Typically Offered: F, W
Prerequisite: EE 308 & EE 348; CPE/EE 328 & CPE/EE 368, or CPE 327 & CPE 367; CPE/EE 329 or CPE/EE 336 or CPE 316. Concurrent: EE 409.

Design of electronic systems and subsystems using integrated circuits. 1 laboratory.

EE 450. Solar Photovoltaic System Engineering. 4 units
Term Typically Offered: W
Prerequisite: one of the following: PHYS 104; PHYS 118; PHYS 121; or PHYS 141; and junior standing.

Engineering principles, design, and installation of solar photovoltaic power systems including grid-tie and off-grid systems. Photonic energy conversion, solar module engineering, solar power electronics, photovoltaic site planning, mechanical and structural considerations, permit processes, government incentives, and analysis of financial and investment issues. Field trips required. 3 lectures, 1 laboratory. Crosslisted as BRAE/EE/HNRS 450.

EE 452. Advanced Analog Circuits Laboratory. 1 unit
Term Typically Offered: W
Prerequisite: EE 314, EE 409 & EE 449. Concurrent: EE 412.

Advanced laboratory study of LC and VCO oscillators, phase detectors, phase-locked loop circuits, transducer interface circuits, noise sources and signal-to-noise determination, ADC and DAC for data conversion. Formal experiments and computer SPICE simulation. 1 laboratory.

EE 455. Analog Filter Design Laboratory. 1 unit
Term Typically Offered: SP

Advanced laboratory study of sensitivity and stability of active networks prescribed for realization of transfer functions by active network synthesis techniques. Formal experiments and individual project work. 1 laboratory.
EE 456. Digital Communication Systems Laboratory. 1 unit
Term Typically Offered: TBD
Prerequisite: EE 314; EE 328 & EE 368 or CPE 327 & CPE 367.

Methods of digital modulation and demodulation. Emphasis on spectral analysis, bandwidth requirements and other practical considerations of modulation and demodulation. 1 laboratory.

EE 458. Photonic Engineering Laboratory. 1 unit
Term Typically Offered: SP
Concurrent: EE 418.

Experimental investigation of the techniques used in processing optical signals. Formal experiments on electro-optic modulation, acousto-optic modulation. Construction of an RF spectrum analyzer. Analog processing of optical signals, and charge-coupled array devices. 1 laboratory.

EE 459. Digital Signal Processing Laboratory. 1 unit
Term Typically Offered: W
Prerequisite: CSC 101 or CSC 231; CPE 327 and CPE 367 or EE 328 and EE 368. Concurrent: EE 419.

Experiments in digital filter design and digital signal processing emphasizing various areas of application. Formal experiments and individual project work, including DSP algorithm and digital filter analysis, design and implementation using Matlab, and real-time implementations using C on an embedded DSP processor. 1 laboratory.

EE 460. Senior Project Preparation. 2 units
Term Typically Offered: F, W
Prerequisite: EE 314, EE 335. Corequisite: EE 409 & EE 449.

Introduction to teamwork and team-oriented project execution. Project planning, scheduling and analysis. Usage of tools for project management including Gantt and Pert Charts. Project development, cost and time estimation using top-down and bottom-up approaches. Ethics and ethical issues as they pertain to the conduct of engineering. Development of senior project proposal. 1 lecture, 1 laboratory.

EE 461. Senior Project I. 2 units
Term Typically Offered: F,W,SP,SU
Prerequisite: EE 409, EE 449 and EE 460.

Investigation and design of a project under faculty supervision. Projects typical of problems which graduates must solve in their fields of employment. Project results are presented in a formal report.

EE 462. Senior Project II. 2 units
Term Typically Offered: F,W,SP,SU
Prerequisite: EE 461.

Continuation and completion of a project under faculty supervision. Projects typical of problems which graduates must solve in their fields of employment. Project results are presented in a formal report.

EE 463. Senior Project Design Laboratory I. 2 units
Term Typically Offered: F,W,SP,SU
Prerequisite: EE 409, EE 449 and EE 460.

Investigation and design of a project under faculty supervision. Projects typical of problems which graduates must solve in their fields of employment. Project results are presented in a formal report. Not open to students with credit in EE 461. 2 laboratories.

EE 464. Senior Project Design Laboratory II. 2 units
Term Typically Offered: F,W,SP,SU
Prerequisite: EE 463.

Continuation and completion of a project under faculty supervision. Projects typical of problems which graduates must solve in their fields of employment. Project results are presented in a formal report. Not open to students with credit in EE 462. 2 laboratories.

EE 470. Selected Advanced Topics. 1-4 units
Term Typically Offered: TBD
Prerequisite: Consent of instructor.

Directed group study of selected topics for advanced students. Open to undergraduate and graduate students. The Class Schedule will list topic selected. Total credit limited to 8 units. 1 to 4 lectures.

EE 471. Selected Advanced Laboratory. 1-4 units
Term Typically Offered: TBD
Prerequisite: Consent of instructor.

Directed group laboratory study of selected topics for advanced students. Open to undergraduate and graduate students. The Class Schedule will list topic selected. Total credit limited to 8 units. 1 to 4 laboratories.

EE 472. Digital Control Systems Laboratory. 1 unit
Term Typically Offered: F
Concurrent: CPE/EE 432.

Design and programming of microprocessor-based digital controls for electro-mechanical plants. Topics include digital control laws, translation of transfer functions into algorithms, assembly language programming, real-time software design, sample rate selection, finite word-length considerations. 1 laboratory. Crosslisted as CPE/EE 472.

EE 475. Communication Networks and Systems Laboratory. 1 unit
Term Typically Offered: F
Prerequisite: CPE/EE 328 and CPE/EE 368, or CPE 327 and CPE 367; EE 314.

Methods of wireline and wireless communication networks and systems. Emphasis on TCP/IP wired networks and modern mobile communication standards. 1 laboratory.

EE 480. Wireless Communications Laboratory. 1 unit
Term Typically Offered: W
Prerequisite: EE 335, EE 314. Concurrent: EE 440.

Wireless microwave system design and analysis. RF transmission lines, microwave networks, receiver design, modulation techniques, and mixer characterization and realizations. Noise and distortion, RF oscillators and frequency synthesizers, filter design. Radiating systems and electromagnetic wave propagation, microwave amplifier design. 1 laboratory.

EE 494. Cooperative Education Experience. 6-12 units
CR/NC
Term Typically Offered: F,W,SP,SU
Prerequisite: Sophomore standing and consent of instructor.

Full-time work experience in business, industry, government, and other areas of student career interest. Positions are paid and usually require relocation and registration in course for two consecutive quarters. Evaluation by work supervisor required. Credit/No Credit grading only. No major credit allowed; total credit limited to 24 units.
EE 495. Cooperative Education Experience. 6-12 units
Term Typically Offered: F,W,S,SP
Prerequisite: Two consecutive quarters of EE 494 immediately preceding EE 495; sophomore standing and consent of instructor.

Full-time work experience in business, industry, government, and other areas of student career interest. Positions are paid and usually require relocation and registration in course for two consecutive quarters. Formal report and evaluation by work supervisor required. Major credit limited to 4 units; total credit limited to 12 units.

EE 500. Individual Study. 1-3 units
Term Typically Offered: F,W,S,SP
Prerequisite: Consent of department chair, graduate advisor, and supervising faculty member.

Advanced study planned and completed under the direction of a member of the department faculty. Open only to graduate students who have demonstrated ability to do independent work. Enrollment by petition. Total credit limit at discretion of graduate advisor, not to exceed 9 units.

EE 502. Microwave Engineering. 4 units
Term Typically Offered: TBD
Prerequisite: EE 402 or equivalent.

EE 504. Software Defined Radio. 4 units
Term Typically Offered: SP
Prerequisite: EE 314; and EE 328 or CPE 327; or graduate standing.

Introduction to software defined radios, including architectures of software defined radio receivers and transmitters, design principles and trade-offs, signal processing techniques, and applications of the technologies. 3 seminars, 1 laboratory.

EE 509. Computational Intelligence. 4 units
Term Typically Offered: SP
Prerequisite: Senior or graduate standing.

Theory, design, and applications of biologically inspired computational paradigms, including artificial neural networks, evolutionary computation, swarm intelligence, and hybrid intelligent systems. 4 seminars.

EE 511. Electric Machines Theory. 4 units
Term Typically Offered: W
Prerequisite: EE 255 or equivalent, and graduate standing or consent of instructor.

Advanced topics in electric machines theory. Introduction to Park’s transformation. Analysis of electric machines using Kron’s generalized concept. Vector control of induction machines. 4 seminars.

EE 513. Control Systems Theory. 4 units
Term Typically Offered: W
Prerequisite: EE 302 or equivalent, and graduate standing or consent of instructor.

State representation of dynamic systems. Mathematical models of physical devices, controllability and observability. Design of closed-loop systems. Optimal control theory. 4 seminars.

EE 514. Advanced Topics in Automatic Control. 4 units
Term Typically Offered: SP
Prerequisite: EE 513 or equivalent, EE 328 or similar course on discrete-time linear systems.

Summary course covering five selected graduate-level topics in automatic control theory and practice; implementation issues in digital control, nonlinear control theory and design, LQ and time optimal control, variable structure control, and fuzzy logic/model-free control. 4 seminars.

EE 515. Discrete Time Filters. 4 units
Term Typically Offered: F
Prerequisite: EE 314 or equivalent, and graduate standing or consent of instructor.

Advanced topics in filter design and implementation. Emphasis placed on current applications and on the processing of real signals. Topics may include signal analysis via spectral estimation, short time Fourier transforms, and spectrograms. Effects of coefficient quantization, and limits of practical filters. State space realization. Optimal and adaptive filters for signal prediction, system identification, and noise cancellation. Techniques implemented in programming assignments. 4 seminars.

EE 516. Pattern Recognition. 4 units
Term Typically Offered: SP
Prerequisite: STAT 312 or STAT 350.

Fundamental topics in statistical pattern recognition including Bayesian decision theory, Maximum-likelihood and Bayesian estimation, non-parametric density estimation, feature selection, dimension reduction, and clustering, with application to image pattern recognition. 3 seminars, 1 laboratory.

EE 518. Power System Protection. 4 units
Term Typically Offered: SP
Prerequisite: EE 406 and graduate standing.

EE 519. Advanced Analysis of Power Systems. 4 units
Term Typically Offered: TBD
Prerequisite: EE 406 or equivalent, and graduate standing or consent of instructor.

Advanced power system stability analysis, numerical methods in power system analysis. 4 seminars.
EE 520. Advanced Solar-Photovoltaic Systems Design. 4 units
Term Typically Offered: SP
Prerequisite: Graduate standing or consent of instructor.

EE 521. Computer Systems. 4 units
Term Typically Offered: SP
Prerequisite: CPE/EE 329 or CPE/EE 336, or equivalent, and graduate standing or consent of instructor.

Organization of modern general purpose, high speed digital computer systems. Design of arithmetic units, control units, memories and memory subsystems. Cost, power and speed trade-offs in the design of such systems. 3 seminars, 1 laboratory. Crosslisted as CPE/EE 521.

EE 522. Advanced Real-Time Operating Systems Design. 4 units
Term Typically Offered: TBD
Prerequisite: CPE/EE 439.

Define and implement a microcontroller-based Real-Time Operating System (RTOS). Advanced real-time concepts, kernel structure, task and time management, various intertask communication constructs including semaphores, queues and mailboxes. Scheduler design, memory management and shared resource management in a resource-constrained microcontroller environment. 3 seminars, 1 laboratory. Crosslisted as CPE/EE 522.

EE 523. Digital Systems Design. 4 units
Term Typically Offered: F
Prerequisite: CPE/EE 329 or CPE/EE 336, and graduate standing.

Full-custom design and analysis of digital circuits using full CMOS, pass-transistor and dynamic circuit topologies. Transistor sizing for minimizing power consumption, delay and other design criteria. 3 seminars, 1 laboratory. Crosslisted as CPE/EE 523.

EE 524. Solid State Electronics. 3 units
Term Typically Offered: TBD
Prerequisite: PHYS 412 or equivalent, and graduate standing or consent of instructor.

Physical theory of solid-state devices. Properties of metal-semiconductor junctions and p-n junctions. Derivation of properties of diodes, transistors, and four-layer devices from basic physical and mathematical considerations. 3 seminars.

EE 525. Stochastic Processes. 4 units
Term Typically Offered: F
Prerequisite: STAT 350 or equivalent, and graduate standing or consent of instructor.

Probability and stochastic processes used in random signal analysis. Response of linear systems to random inputs. Auto-correlation and power spectral densities. Applications in signal processing using the discrete Kalman filter. 4 seminars.

EE 526. Advanced Digital Communications. 4 units
Term Typically Offered: W
Prerequisite: EE 314, EE 416, and graduate standing.

EE 527. Advanced Topics in Power Electronics. 4 units
Term Typically Offered: SP
Prerequisite: EE 410 or equivalent, and graduate standing or consent of instructor.

Selected advanced topics in power electronics such as dc-dc converters, phase-controlled rectifiers, switched-mode inverters, ac and dc drives, HVDC transmission, or utility applications of power electronics. 4 seminars.

EE 528. Digital Image Processing. 4 units
Term Typically Offered: F
Prerequisite: CPE 327 or EE 328; EE 525; and graduate standing.

Processing and interpretation of images by computer. Emphasis on current applications with real images used in programming assignments. Topics may include histogram equalization, 2-D convolution, correlation, frequency-domain processing, median filtering, compression, Hough transform, segmentation and region growing, morphological operations, texture description, shape description, Bayes classifier. 4 seminars.

EE 529. Microwave Device Electronics. 4 units
Term Typically Offered: W
Prerequisite: EE 306 or graduate standing.

Emphasis on device theory of operation, fabrication techniques and circuit principles of active microwave solid-state devices, their noise aspects and systems applications. 3 lectures, 1 laboratory.

EE 530. Fourier Optics. 4 units
Term Typically Offered: W
Prerequisite: EE 402 or equivalent, EE 314 or equivalent, and graduate standing or consent of instructor.

Approach to the design and analysis of optical systems using linear communication theory, including Fourier analysis. Analysis of two-dimensional signals and systems, foundations of scalar diffraction theory. Fresnel and Fraunhofer diffraction. Wave-optics analysis of coherent optical systems, frequency analysis of optical imaging systems, holo-graphy. 4 seminars.

EE 531. Advanced VLSI Design. 4 units
Term Typically Offered: SP
Prerequisite: CPE 441/EE 431.

Advanced Very Large Scale Integrated (VLSI) design using state-of-the-art software. Advanced topics in digital, analog and mixed signal circuit design to enable a quarter-long design project culminating in a tapeout-ready integrated circuit design. 3 lectures, 1 laboratory. Crosslisted as CPE 541/EE 531.
